

(25) Myhill Nerode Theorem - Table filling

Method

S.3

for minimization of DFA

Steps:

- 1) Draw a table for all pairs of states (P, Q)
- 2) Mark all pairs where $P \in F$ and $Q \notin F$
- 3) if there are Unmarked pairs (P, Q) such that $[\delta(P, x), \delta(Q, x)]$ is marked, then mark $[P, Q]$. REPEAT THIS UNTIL NO MORE MARKINGS CAN BE MADE
- 4) Combine all the Unmarked Pairs and make them a single state in the minimized DFA

eg,

 $\delta(A, 0) : B$ } $\delta(A, 1) : C$ } to mark
