Date / /

8. Regular language 5.1

- A language is said to be a REGULAR LANGUAGE if and only if some Finite State Machine recognizes it.

So what language are NOT REGULAR?

The languages

>> which are not recognized by any FSM

>> which require memory

- Memory of FSM is very limited

- It cannot store or count strings.

non-regular
↓

Eg. ababbababb
X

non-regular
↓

Eg. $a^n b^n$ X
